

Streampeak.

Streampeak makes it easier for influencers and brands to work together by enabling faster and easier implementations of sponsorship deals through a web-based application. This will enable more influencers to earn a living of their audience, and brands to utilize more influencers in their marketing efforts.

MemBrain.

MemBrain is developing a graphene technology for targeted filtration and/or purification. The flexible solution focuses on surface properties rather than pore size. It can operate in various environments and the first application area is the pulp industry where it reduces the inhibitory factors.

rdot.

rdot is developing the most energy efficient color display in the world. The combination of vibrant color rendering, energy efficiency, paper-like readability, flexibility and thinness makes rdot's reflective display truly unique, enabling development of visual solutions which fulfil the expectations of future generations.

Evispot.

Evispot.AI provides the financial industry with more accurate credit decisions. Instead of looking at one person's credit behaviour, we analyse the behavioural characteristics of the many. It is done by exploring artificial intelligence - because no human, neither configured software can handle the complexity of data that must be evaluated.
